Abrolhos Islands and Mid West Trawl Managed Fishery Management Plan 1993 (CEO Notice)

Data Citation

Title: Abrolhos Islands and Mid West Trawl Managed Fishery Management Plan 1993 -Notice of Areas Open or Closed to Fishing for Prawns and Scallops

Custodian

Custodian: Department of Primary Industries and Regional Development

Jurisdiction: Western Australian

Description

Abstract

This spatial boundary supports the CEO Notices and Determination for the Abrolhos Islands and Mid West Trawl Managed Fishery Management Plan 1993 – Notice of Areas Open or Closed to Fishing for Prawns and Scallops in relation to the Fish Resources Management Act 1994.

ANZLIC search words:

- BOUNDARIES
- FISHERIES

Geographic Extent Name:

Shark Bay, WA

Geographic bounding box: (all coordinates in decimal degrees)

North bounding latitude: - 27.850000

South bounding latitude: - 29.050000

East bounding longitude: 114.300000

West bounding longitude: 113.137500

The bounding box encloses the maximum extents of the dataset. There may be voids or gaps within the bounding box, depending on the defined coverage of the dataset.

Horizontal Coordinate System:

Access

Stored data format:

Digital: ESRI Geodatabase

Available format type:

Digital: ESRI Shapefile

Access Constraints

Access is subject to the conditions of a license agreement. Permission required from the Department of Primary Industries and Regional Development. This data is indicative only and a disclaimer applies. Where compliance is an issue, indicative data should not be used.

Data Quality

Lineage

This dataset was created from a number of sources:

1. Landgate's detailed coastline extracted from the Hydrography Geodatabase (Framework Polygon/Framework Linework) in 2013.
NOTE: the line work that depicts the coastline in this dataset follows a mean high water mark (MHWM).

Coastline altered by DoF (28/08/14) to include the reclaimed land at Rous Head, Fremantle.

Coastline altered by DoF (29/01/15) to include additional canals in the Exmouth Marina. Canal boundary definitions sourced from DoTs Coastal Infrastructure.

Coastline altered by DoF (21/09/15) to include the Augusta Boat Harbour. Harbour boundary created using Landgate's aerial photograph 'Augusta Harbour Beach Environs Dec 2014'.
2. Landgate's GEONOMA dataset was used where references were made to place names.
3. The boundary is in part defined by a list of coordinates taken from the Abrolhos Islands and Mid West Trawl Managed Fishery Management Plan 1993 - Notice of Areas Open or Closed to Fishing for Prawns and Scallops under the Fish Resources Management Act 1994. Refer to the additional metadata for web links to the documents.
4. The boundary is in part defined by a list of coordinates taken from the Houtman Abrolhos Reef Observation Areas Notice 1994 (Notice No.637) under the Fish Resources Management Act 1994.

Positional Accuracy

The positional accuracy of the boundary will vary depending on the accuracy of the source data:

1. Landgate's detailed coastline extracted from the Hydrography Geodatabase (Framework Polygon/Framework Linework) in 2013.
NOTE: the line work that depicts the coastline in this dataset follows a mean high water mark (MHWM).

Coastline altered by DoF (28/08/14) to include the reclaimed land at Rous Head, Fremantle.

Coastline altered by DoF (29/01/15) to include additional canals in the Exmouth Marina. Canal boundary definitions sourced from DoTs Coastal Infrastructure.

Coastline altered by DoF (21/09/15) to include the Augusta Boat Harbour. Harbour boundary created using Landgate's aerial photograph 'Augusta Harbour Beach Environs Dec 2014'.
2. The GEONOMA dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
3. Parts of the boundary are considered to have high positional accuracy where it has been digitized using coordinates from the legislation.

This dataset replaces any versions of the data prior to April 2011

Attribute Accuracy

The attributes were classified in accordance with the legislation compilation provided by the Department of Primary Industries and Regional Development. Attribute design now caters for feature level metadata.

Logical Consistency

Data reviewed using ESRI ArcGIS Desktop software.

Completeness

Line work and attributes are complete. Any modifications to the boundary are to be verified by the Department's Manager, Geospatial Services.

Access Constraints

Access is subject to the conditions of a license agreement. Permission required from the Department of Primary Industries and Regional Development. This data is indicative only and a disclaimer applies. Where compliance is an issue, indicative data should not be used.

Data Quality

Lineage

This dataset was created from a number of sources:

1. Landgate's detailed coastline extracted from the Hydrography Geodatabase (Framework Polygon/Framework Linework) in 2013.
NOTE: the line work that depicts the coastline in this dataset follows a mean high water mark (MHWM).

Coastline altered by DoF (28/08/14) to include the reclaimed land at Rous Head, Fremantle.

Coastline altered by DoF (29/01/15) to include additional canals in the Exmouth Marina. Canal boundary definitions sourced from DoTs Coastal Infrastructure.

Coastline altered by DoF (21/09/15) to include the Augusta Boat Harbour. Harbour boundary created using Landgate's aerial photograph 'Augusta Harbour Beach Environs Dec 2014'.
2. Landgate's GEONOMA dataset was used where references were made to place names.
3. The boundary is in part defined by a list of coordinates taken from the Exmouth Gulf Prawn Managed Fishery Management Plan 1989 – Notice of Areas Closed to Fishing under the Fish Resources Management Act 1994. Refer to the additional metadata for web links to the documents.

Positional Accuracy

The positional accuracy of the boundary will vary depending on the accuracy of the source data:

1. The 2013 detailed coastline dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
2. The GEONOMA dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
3. Parts of the boundary are considered to have high positional accuracy where it has been digitized using coordinates from the legislation.

This dataset replaces any versions of the data prior to March 2017

Attribute Accuracy

The attributes were classified in accordance with the legislation compilation provided by the Department of Primary Industries and Regional Development. Attribute design now caters for feature level metadata.

Logical Consistency

Data reviewed using ESRI ArcGIS Desktop software.

Completeness

Line work and attributes are complete. Any modifications to the boundary are to be verified by the Department's Manager, Geospatial Services.

Kimberley Prawn Managed Fishery (CEO Notice)

Data Citation

Title: Kimberley Prawn Managed Fishery Management Plan 1993 - Notice of Areas Closed to Fishing for Prawns

Custodian

Custodian: Department of Primary Industries and Regional Development

Jurisdiction: Western Australian

Description

Abstract

This spatial boundary supports the CEO Notice and Determination for Kimberley Prawn Managed Fishery Management Plan 1993 – Notice of Areas Closed to Fishing for Prawns, in relation to the Fish Resources Management Act 1994.

ANZLIC search words:

- BOUNDARIES
- FISHERIES

Geographic Extent Name:

Kimberley, Western Australia

Geographic bounding box: (all coordinates in decimal degrees)

North bounding latitude: -11.280563

South bounding latitude: -16.469280
East bounding longitude: 126.966667
West bounding longitude: 123.750000

The bounding box encloses the maximum extents of the dataset. There may be voids or gaps within the bounding box, depending on the defined coverage of the dataset.

Horizontal Coordinate System:

Geographic System

Horizontal Coordinate System: Geographic System

Geodetic Model: GDA 1994

Data currency

Beginning date: 2010-07-28

Ending Date: 2018-03-16

Dataset status

Progress: Complete

Maintenance and update frequency: As Required

Access

Stored data format:

Digital: ESRI Geodatabase

Available format type:

Digital: ESRI Shapefile

Access Constraints

Access is subject to the conditions of a license agreement. Permission required from the Department of Primary Industries and Regional Development. This data is indicative only and a disclaimer applies. Where compliance is an issue, indicative data should not be used.

Data Quality

Lineage

This dataset was created from a number of sources:

1. Geoscience Australia's Geodata Coast 100K 2004 dataset. The coastline component of the GEODATA COAST 100K 2004 dataset is primarily sourced from the 1:100,000 scale National Topographic Map Series produced by Geoscience Australia and the Royal Australian Survey Corps. The Western Australian component of the coastline was captured by the Department of Land Administration (now Landgate).
2. Geoscience Australia's Australian Maritime Boundaries (AMB) 200NM Exclusive Economic Zone (EEZ).
3. The boundary is in part defined by a list of coordinates taken from the Kimberley Prawn Managed Fishery Management Plan 1993 - Notice of Areas Closed to Fishing for Prawns under the Fish Resources Management Act 1994. Refer to the additional metadata for web links to the documents.

Positional Accuracy

The positional accuracy of the boundary will vary depending on the accuracy of the source data:

1. The 100K coastline does not have the same level of accuracy as Landgate's detailed coastline. Due to the large spatial extent of the

- fishery, a less detailed coastline had to be used to allow for efficient processing of the data.
2. The Exclusive Economic Zone boundary is considered to have high positional accuracy and in general can be regarded as having been computed to an accuracy of one metre. Reference should be made to the relevant metadata.
 3. Parts of the boundary are considered to have high positional accuracy where it has been digitised using coordinates from the legislation.

This dataset replaces any versions of the data prior to March 2018.

Attribute Accuracy

The attributes were classified in accordance with the legislation compilation provided by the Department of Primary Industries and Regional Development. Attribute design now caters for feature level metadata.

Logical Consistency

Data reviewed using ESRI ArcGIS Desktop software.

Completeness

Line work and attributes are complete. Any modifications to the boundary are to be verified by the Department's Manager, Geospatial Services.

Digital: ESRI Shapefile

Access Constraints

Access is subject to the conditions of a license agreement. Permission required from the Department of Primary Industries and Regional Development. This data is indicative only and a disclaimer applies. Where compliance is an issue, indicative data should not be used.

Data Quality

Lineage

This dataset was created from a number of sources:

1. Landgate's detailed coastline extracted from the Hydrography Geodatabase (Framework Polygon/Framework Linework) in 2013.
NOTE: the line work that depicts the coastline in this dataset follows a mean high water mark (MHWM).

Coastline altered by DoF (28/08/14) to include the reclaimed land at Rous Head, Fremantle.

Coastline altered by DoF (29/01/15) to include additional canals in the Exmouth Marina. Canal boundary definitions sourced from DoTs Coastal Infrastructure.

Coastline altered by DoF (21/09/15) to include the Augusta Boat Harbour. Harbour boundary created using Landgate's aerial photograph 'Augusta Harbour Beach Environs Dec 2014'.
2. Landgate's GEONOMA dataset was used where references were made to place names.
3. The boundary is in part defined by a list of coordinates taken from the Onslow Prawn Managed Fishery Management Plan 1991 –

Notice of Areas Closed to Fishing for Prawns under the Fish Resources Management Act 1994. Refer to the additional metadata for a web link to that document.

Positional Accuracy

The positional accuracy of the boundary will vary depending on the accuracy of the source data:

1. The 2013 detailed coastline dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
2. The GEONOMA dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
3. Parts of the boundary are considered to have high positional accuracy where it has been digitized using coordinates from the legislation.

This dataset replaces any versions of the data prior to March 2017.

Attribute Accuracy

The attributes were classified in accordance with the legislation compilation provided by the Department of Primary Industries and Regional Development. Attribute design now caters for feature level metadata.

Logical Consistency

Data reviewed using ESRI ArcGIS Desktop software.

Completeness

Line work and attributes are complete. Any modifications to the boundary are to be verified by the Department's Manager, Geospatial Services.

Jurisdiction: Western Australian

Description

Abstract

This spatial boundary supports the CEO Notices and Determination for the Shark Bay Prawn Managed Fishery Management Plan 1993 – Determination of Areas Closed to Fishing for Prawns, in relation to the Fish Resources Management Act 1994.

ANZLIC search words:

- BOUNDARIES
- FISHERIES

Geographic Extent Name:

Shark Bay, Western Australia

Geographic bounding box: (all coordinates in decimal degrees)

North bounding latitude: 23.566667

South bounding latitude: -26.672264

East bounding longitude: 114.261396

West bounding longitude: 112.291667

The bounding box encloses the maximum extents of the dataset. There may be voids or gaps within the bounding box, depending on the defined coverage of the dataset.

Horizontal Coordinate System:

Geographic System

Horizontal Coordinate System: Geographic System

Geodetic Model: GDA 1994

Data currency

Beginning date: 2012-03-09

Ending Date: 2018-03-14

Dataset status

Progress: Complete

Maintenance and update frequency: As Required

Access

Stored data format:

Digital: ESRI Geodatabase

Available format type:

Digital: ESRI Shapefile

Access Constraints

Access is subject to the conditions of a license agreement. Permission required from the Department of Primary Industries and Regional Development. This data is indicative only and a disclaimer applies. Where compliance is an issue, indicative data should not be used.

Data Quality

Lineage:

This dataset was created from a number of sources:

1. Landgate's detailed coastline extracted from the Hydrography Geodatabase (Framework Polygon/Framework Linework) in 2010. NOTE: the line work that depicts the coastline in this dataset follows a mean high water mark (MHWM).
2. Landgate's GEONOMA dataset was used where references were made to place names.
3. The boundary is in part defined by a list of coordinates taken from the Shark Bay Prawn Managed Fishery Management Plan 1993 – Determination of Areas Closed to Fishing for Prawns under the Fish Resources Management Act 1994. Refer to the additional metadata for web links to the documents.

Positional Accuracy

The positional accuracy of the boundary will vary depending on the accuracy of the source data:

1. The 2010 detailed coastline dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
2. The GEONOMA dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
3. Parts of the boundary are considered to have high positional accuracy where it has been digitised using coordinates from the legislation.

This dataset replaces any versions of the data prior to April 2016.

Attribute Accuracy

The attributes were classified in accordance with the legislation compilation provided by the Department of Primary Industries and Regional Development. Attribute design now caters for feature level metadata.

Logical Consistency

Data reviewed using ESRI ArcGIS Desktop software.

Completeness

Line work and attributes are complete. Any modifications to the boundary are to be verified by the Department's Manager, Geospatial Services.

West Coast Rock Lobster Management Plan 1993 - Abrolhos Islands Designated Rock Lobster Pot Soaking Areas (CEO Notice)

Data Citation

Title: West Coast Rock Lobster Management Plan 1993 - Abrolhos Islands Designated Rock Lobster Pot Soaking Areas, Notice Number 1 of 2010

Custodian

Custodian: Department of Primary Industries and Regional Development

Jurisdiction: Western Australian

Description

Abstract

This spatial boundary supports the CEO Notice and Determination for the West Coast Rock Lobster Management Plan 1993 - Abrolhos Islands Designated Rock Lobster Pot Soaking Areas Notice Number 1 of 2010, in relation to section 54 of the Fish Resources Management Act 1994.

ANZLIC search words:

Access Constraints

Access is subject to the conditions of a license agreement. Permission required from the Department of Primary Industries and Regional Development. This data is indicative only and a disclaimer applies. Where compliance is an issue, indicative data should not be used.

Data Quality

Lineage

This dataset was created from a number of sources:

1. Landgate's detailed coastline extracted from the Hydrography Geodatabase (Framework Polygon/Framework Linework) in 2013.
NOTE: the line work that depicts the coastline in this dataset follows a mean high water mark (MHW).

Coastline altered by DoF (28/08/14) to include the reclaimed land at Rous Head, Fremantle.

Coastline altered by DoF (29/01/15) to include additional canals in the Exmouth Marina. Canal boundary definitions sourced from DoTs Coastal Infrastructure.

Coastline altered by DoF (21/09/15) to include the Augusta Boat Harbour. Harbour boundary created using Landgate's aerial photograph 'Augusta Harbour Beach Environs Dec 2014'.
2. Landgate's GEONOMA dataset was used where references were made to place names.
3. The boundary is in part defined by a list of coordinates taken from the West Coast Rock Lobster Management Plan 1993 - Abrolhos Islands Designated Rock Lobster Pot Soaking Areas Notice Number 1 Of 2010.

Positional Accuracy

The positional accuracy of the boundary will vary depending on the accuracy of the source data:

1. The 2013 detailed coastline dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
2. The GEONOMA dataset is considered to have good positional accuracy and reference should be made to the relevant metadata.
3. Parts of the boundary are considered to have high positional accuracy where it has been digitized using coordinates from the legislation.

This dataset replaces any versions of the data prior to January 2010

Attribute Accuracy

The attributes were classified in accordance with the legislation compilation provided by the Department of Primary Industries and Regional Development. Attribute design now caters for feature level metadata.

Logical Consistency

Data reviewed using ESRI ArcGIS Desktop software.

Completeness

Line work and attributes are complete. Any modifications to the boundary are to be verified by the Department's Manager, Geospatial Services.
